SUMMARY

Software Engineer with 2+ years of experience building production React and React Native applications at Capgemini and SS&C Intralinks, focused on performance and accessibility. Builds and deploys full-stack apps with Next.js, Python, FastAPI, Node.js, PostgreSQL, and LLM APIs. MS in Software Engineering Systems at Northeastern University (Dec 2026).

EDUCATION

Northeastern University, Boston, MA Expected Dec 2026
Master of Science, Software Engineering Systems GPA: 3.78/4.0
Courses: Web Development, Object-Oriented Design, Software Engineering, Computational Skepticism for AI

D.Y. Patil College of Engineering (Pune University) June 2018 - June 2022
Bachelor of Engineering, Electronics and Telecommunication

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL
Front-End: React.js, Next.js, React Native, Redux, HTML, CSS, Tailwind CSS, Material UI, D3.js, Storybook
Back-End & APIs: Node.js, Express.js, FastAPI, RESTful APIs, JWT Authentication, Role-Based Access Control (RBAC)
Databases: PostgreSQL (pgvector, SQLAlchemy, Alembic), MongoDB (Mongoose), MySQL, Firebase
AI & ML: Gemini API, scikit-learn, SciPy, sentence-transformers, TF-IDF, recommendation systems
DevOps & Testing: Docker, GitHub Actions (CI/CD), Vercel, Pytest, Jest, React Testing Library, Supertest
Tools: Git, GitHub, VS Code, Xcode, Android Studio, Jira, Figma

WORK EXPERIENCE

Software Engineer Co-op – SS&C Intralinks Aug 2025 - Dec 2025
- Built production features for enterprise-scale React and TypeScript applications within a large shared codebase.
- Implemented condition-based logic in authentication and account recovery workflows to support multiple authentication methods, and authored design-level documentation of system flows for cross-functional teams.
- Resolved production UI and data issues across navigation flow, pagination, and data rendering; removed unused framework code to align with internal engineering standards.
- Improved UI responsiveness across core workflows and fixed accessibility issues in shared Storybook web components.

Software Engineer – Capgemini, Mumbai July 2022 - July 2024
- Optimized React Native screens (home, cards, spending statistics) for a major Italian bank's iOS/Android app, improving performance by 27% and boosting user retention.
- Integrated RESTful APIs for real-time banking transactions, improving data retrieval efficiency and reducing processing delays.
- Resolved critical production issues tracked in Jira, reducing crash rates by 51%; onboarded 3 new teammates.
- Enhanced accessibility, including screen reader support, improving usability by 19% and meeting accessibility standards.

Software Engineer Intern – Capgemini, Mumbai April 2022 - May 2022
- Engineered a cross-platform iOS/Android hydration tracker with weekly/monthly data visualizations and reminders.

PROJECTS

Plotline – AI-Powered Movie Recommendation Platform | GitHub | Live Demo Sept 2026 - Present
- Built and deployed a solo full-stack app (Next.js, FastAPI, PostgreSQL) with a hybrid recommender blending item-to-item collaborative filtering over 6.45M MovieLens ratings with TF-IDF content-based filtering.
- Moved similarity computation to an offline pipeline precomputing top-50 neighbours per movie, cutting recommendation time from ~27 s to near-instant and shrinking the database from 2.45 GB to 291 MB.
- Integrated the Gemini API for recommendation explanations, with a templated fallback and a quota-error circuit breaker.
- Designed a backend-for-frontend architecture with JWTs in httpOnly cookies; built rate-limited, single-use email password reset, closing a production token-exposure issue.
- Wrote 97 Pytest and 74 Jest tests; GitHub Actions CI runs linting, tests, and Docker builds per PR and auto-deploys.

PawConnect – Pet Adoption & Care Platform | GitHub Sept 2024 - Present
- Built auth pages, a Google Maps salon finder, and NGO management in a 4-person team (React, TypeScript, Node.js, MongoDB); then solo-added JWT auth and role-based access control (USER/NGO/ADMIN).
- Hardened the Express API with rate limiting, helmet, and zod field whitelisting to block mass assignment; fixed plain-text password updates and leaked hashes.
- Merged four duplicate map pages into one reusable component (bundle 777 KB to 635 KB); cut vulnerabilities from 38 to 0 and added 19 API tests with CI.
